

IN THE CLAIMS

Please amend the claims as follows:

1. (Currently Amended) A method of adhering a first member to a second member via an intermediate member, said method comprising:
 - positioning said first member and said second member relative to each other;
 - applying a first adhesive to a first surface destined to comprise a first interface between said first member and said intermediate member;
 - applying a second adhesive to a second surface destined to comprise a second interface between said second member and said intermediate member;
 - contacting said first member to said intermediate member via said first adhesive to form said first interface;
 - contacting said second member to said intermediate member via said second adhesive to form said second interface; and
 - curing said first adhesive and said second adhesive using UV light such that said intermediate member, ~~but not said first and second members~~, can move due to shrinkage of at least one of said first adhesive and said second adhesive, wherein said curing step includes filtering said light such that a color of said intermediate member is maintained,
- wherein, after curing, said first member and said second member are fixed to said intermediate member and therefore fixed to each other.
